

Better Outcomes For Your Patients

Best practice simulation means not just going through the motions. It means putting it all together at the right time. Receive accurate real time feedback on the entire crew's full skills performance, and see how it influences the condition of the patient. Give your team the advantage of SmartMan Team Trainer Objective Debriefing.

INTEGRATED SCENARIOS

The Team Trainer allows you to integrate skills performance within the overall team effort. This greatly improves the reality of your training scenarios. Skills, performance, decisions, interruptions and actions are all related in real time to the condition of the patient. See a display of the health status and cerebral blood flow as they respond to how well things are performed in a timely manner as the scenario unfolds.

ACCURATE FACT-BASED DEBRIEFING

The After Action Report provides objective evidence based suggestions on how the team effort can be improved for the patient. It brings focused factual suggestions to your debriefing and directly points to how it can be improved. It focuses everyone on how they can improve working together to improve the outcome for the patient.
