

“Inspired by our patients, Driven by the future” was this year’s theme”

SmartMan Stands Out at IMSH 2020

Our **NEW** RSIM Product Range took center stage. Designed to fill in the gaps in your Simulation Training, they bring World’s Best practice to Task Training and Team Training. They offer Objective Measures on Team Performance and Cooperation. These full body Simulators provide visual feedback and Quick-View Graphs for rapid, on the spot objective debriefing.

Our SmartMan Infant is still the only feedback baby with real time airflow and adjustable lung capacity. Pediatric Specialists and Anaesthesiologists were lined up to give it a go. In the words of one physician after 15 minutes on SmartBaby, “Amazing, Simply Amazing!”.

Our proprietary sensors and DTFIS (Delta Tidal Flow Interactive System) lead the way with best practice skill development.

High Fidelity Manikins with Physical and Digital Feedback and Immediately Available Objective Accurate Data
