

SmartMan in San Diego, December 2015

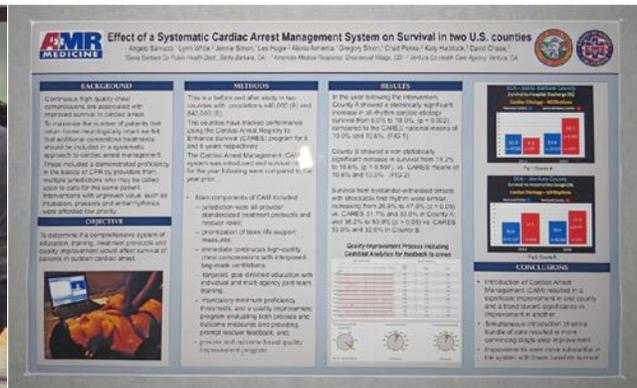

The SmartMan team had a busy time in San Diego. We had record interest and many people looking to improve the quality of CPR in their programs took advantage of our presence to get some firsthand experience on our systems

SmartMan at Emergency Cardiovascular Care Conference The 2015 Resuscitation Guidelines: Translating Science into Survival

The SmartMan booth was extremely busy. With 5 science sessions reporting how SmartMan leads to improved outcomes and how SmartMan has the highest retention rates of any system, and how it can be incorporated into system wide use with ease and little expense, a lot of people dropped by for a closer look.

We showed off our award winning feedback system on the Megacode and the ALS Low Volume. We had one full body and one torso manikin on the stand. There is an increasing interest in our easy to use data tracking and graphing features.

The baby was a big hit, especially the real time feedback for improve ventilations. “Wow – I’ve never seen anything as good as that!” sums up a number of the comments from users on the baby.
