

## SmartMan in San Diego, January 2016

More and more people recognize the importance of high quality devices paired with state of the art software.

SmartMan brings world's best practice at a reasonable price to CPR Training.

### Simulations that respond to performance

Our advanced simulations provide graphical displays which respond to the quality of skills being performed. They bring a visual dimension to viewing how performance of CPR skills influence the health status of the patient and how hands-off time (fraction) directly impact cerebral blood flow. These respond in real time to performance parameters.

There was a particular strong interest in our feedback on the interaction of the chest compressions and ventilations. This represents a new standard in how the positive and negative pressure produced by chest compressions interacts with ventilations and how these influence the potential outcome of the patient.

Thank you to all of the people who came to the SmartMan room. This coincided with the IMSH Society for Simulation in Healthcare conference at the San Diego convention center.
